Connected experience for effective therapies

“Our aim has always been to bring together diverse experts from many fields and backgrounds and to connect them. To get them excited about the future of oncology. Whether it’s innovative clinical trials, real world data or personalized medicine - only joint efforts will improve research and healthcare.”

Dr. med. Norbert Marschner, CEO

iOMEDICO connects clinical data with quality of life, experience with analysis, technology with oncology.

For more than 25 years, we have been dedicated to oncological research. Our goal is to make effective therapies available to patients quickly and to improve tumor treatment. For more efficacy – for more quality of life.

iOMEDICO stands for oncological science rooted in the real world. We design research projects and connect stakeholders with the aim of permanently advancing oncological knowledge and patient care. The basis for this is networking and collaboration. For us, this means fair cooperation with study groups and professional associations, with the pharmaceutical industry and with our high-performing network of physicians. Each with their expertise, each with their experience.

- Over 25 years of CRO experience
- Covering all oncological and hematological entities
- Clinical trials & real world data (RWD)
- Large investigator network
- International clinical operations
- High quality standards
- Clinical research excellence

iOMEDICO services

As a full-service clinical research organization (CRO), we offer all clinical research services from study design to publication from a single source.

Rapidly proving the efficacy and safety of new therapies and making them available to physicians and patients is only possible with high-quality performance, an extended, cross-sector physicians network and proven experience. iOMEDICO is an international, full-service CRO and has been realizing phase I – IV clinical trials, non-interventional studies, tumor registries and registry platforms for over 25 years. As an independent research institute, we also conduct investigator-initiated trials (IIT) and assume sponsor responsibility.

Quality and speed are crucial in clinical research.

Excellent results are achieved through the knowledge and practical experience of our team of oncologists, the operational and scientific expertise of our staff and innovative technologies and digitalization. We use the collected data and analytics to make tumor treatment more transparent, to validate study results down to the subgroups, and thus allow our clients to break new ground in clinical development. The large iOMEDICO study network supports the rapid placement, conduct and finalization of projects in the interest of the patients, the treating physicians and the pharmaceutical industry.

Our solutions

Design

- Science-driven clinical trial design
- Medical consulting
- Therapeutic expertise
- Traditional & complex innovative designs
- Explanatory & pragmatic trials

Conduct

- Full-service CRO capabilities
- Large investigator network
- Proprietary EDC
- E2B-R3 safety reporting
- CDISC
- Risk-based monitoring

Site Participation

- Feasibility & site selection
- Patient engagement
- Site support

Information & Communication

- Study portal & TRIALS platform
- KPI portal
- Investigator meetings
- Study reports
- Scientific publications

Value-adding Tools

- eHealth tools
- Site management
- Biobanking
- Patient trust center

more than

900 active sites

With its high-performance patient inclusion, our cross-sector network of physicians helps to attain milestones in clinical research quickly and make innovative therapies accessible to patients.

NETWORKING
& EVENTS

In recent years, real world data have caught up with randomized clinical trials. They create transparency in health care and show the real value of treatments. We started the first iMEDICO tumor registry back in 2006. Through the support of numerous sites and the pharmaceutical industry, a valuable, real world database has emerged which is unique, particularly in its detailed, prospective, long-term documentation. The medically relevant insights into the health care reality show the potential of current therapy options and strategies for optimization. Real world data support strategic decisions and the approval of new substances and their benefit assessment.

Today, the iMEDICO PAN registry platform contains over 60,000 data sets of patients from all major oncological entities – and more are added every day.

In 2020, the entity-specific platforms were complemented by molecular cross-entity platforms. They allow insights into treatment before and after the approval of new therapies and are of tremendous value for progress in oncology.

Our solutions

Research

- Tumor registries & platforms
- Clinical epidemiology & health care research
- Long-term survivorship health
- Precision oncology
- Health economics
- Predictive medicine

Outcome

- Real world evidence
- Real world value & outcome
- Patient preference & physician decision-making
- Patient reported outcome PRO

Commercial

- Market insights & assessment
- Clinical development strategies
- Approval & market access support
- Forecasting
- Post-marketing

Pragmatic trial

Accelerating patients' access to innovative therapies

iMEDICO pioneers new solutions for advanced clinical trials and enables innovative study designs. The extensive real world database and the concept of pragmatic studies provide evidence even for small study-populations – as necessary in precision oncology.

Explanatory trial

Faster, more detailed, and more targeted – future-oriented analytics and digital health solutions enable better results in treatment. The foundation for this is our extensive database of clinical data, biomarker profiles and patient reported outcome which has evolved over 15 years. Many years of experience and profound expert know-how, combined with medical analytics and cutting-edge technology, have made it a recognized treasure trove for research and health care. iOMEDICO connects the resources following the principle of generating knowledge through new insights – from real world to research and back to patient care.

As questions become more complex, artificial intelligence and machine learning will allow new and even more exciting analysis possibilities (2022). iOMEDICO and its digital solutions close the gap between data collection, research, and clinical decision-making. To drive research and advance our understanding of cancer.

Our solutions

Data

- Comprehensive clinical database
- Connected data networks
- Data visualization
- Digital ecosystem
- Standardized data pipeline
- Data warehouse
- CDISC

Analytics

- Oncologic data science
- Real world analytics
- Biomarker driven analytics
- Cutting-edge statistical modeling
- Machine learning solutions (2022)

Benefit

- Predict outcome with greater precision
- Identify promising subpopulations
- Find treatments for rare diseases
- Turn collected data into business decision platforms

Our real world data platform links clinical data with translational analytics and patient reported outcome (PRO), to answer the complex questions of precision oncology – even for orphan diseases and unmet medical needs.

NETWORKING
& EVENTS

The driving force of clinical research is the knowledge and experience of all involved. Only through exchange and collaboration is it possible to fully tap into this potential and effectively implement the results in health care. We created various types of events to further networking and communication. Over the years, several cooperations have been initiated - building an extensive and highly efficient research network.

iOMEDICO meetings are known as platforms for exchange. Under the motto ***Impulses for research and health care***, specialists discuss current research results, treatment approaches and trial concepts with representatives of the pharma industry. Together, they transfer experiences from science and practice into patient-relevant solutions for day-to-day clinical life. Every meeting is a special event, nurturing collaboration through many opportunities for collegial exchange.

Our solutions

Medical Consulting

- Large investigator network
- Internal oncologists & hematologists
- Institutional insights from the practice
- Collaboration with external medical experts & KOL

Platforms

- OnkoRat – Scientific Study & Research Symposium
- TIME & PATIENT – Symposium for Innovation in Study & Practice Logistics
- REAL EVIDENCE – Real World Data Meeting
- INSIGHT – Trial Launch Meeting
- Investigator meetings
- Advisory boards
- Steering boards

Publications

- National & international congresses
- International scientific journals
- VISION – Journal for oncologists & hematologists
- Scientific newsletters

Your benefits

- ✓ Translate oncological science and expertise into new treatment options
- ✓ Rapidly confirm efficacy and safety of medicinal products
- ✓ Introduce independent data into drug approval and benefit assessment
- ✓ Identify real world evidence to realize the full potential of your products
- ✓ Accelerate research & development processes through innovative technologies and data science
- ✓ Reach physicians and patients with your innovative drugs

iOMEDICO

Research is our passion. Together we advance the understanding and treatment of cancer.
